

## Position for a student assistant (HiWi) with a background in condensed matter physics

We are looking for a student researcher to join our group and work on the project related to X-ray diffraction studies of the film structures. The applicant will be analyzing the experimental data collected in our laboratories as well as at leading synchrotron sources around the world. The applicant will be able to perform more experimental work (e.g. sample environment design) or numerical simulations depending on his/her own interests.

Desired skills:

- Proficiency in English (working language)
- Fundamentals in physics and enthusiasm to extend the knowledge specifically in condensed matter physics
- Basic programming skills (e.g. Matlab or Python)
