"Nano-Science in Motion"

Molecular and Biological Matter

"Nano-Science in Motion"

- Welche Themen gibt es ?
- Wie wähle ich „mein Thema“ aus ?
- Was sind die Kriterien zur Auswahl ?
- Wie läuft die Arbeit in der Praxis ?
- Was muss ich sonst noch wissen ?

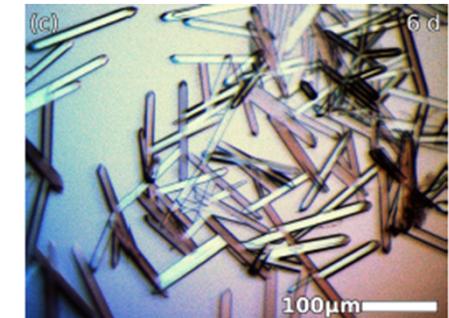

Frank Schreiber

Molecular and Biological Matter

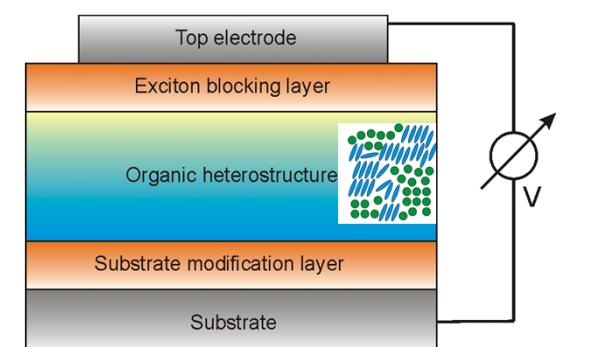

Protein Biophysics (Fajun Zhang)

COINs (Kooperation mit Marcus Scheele)

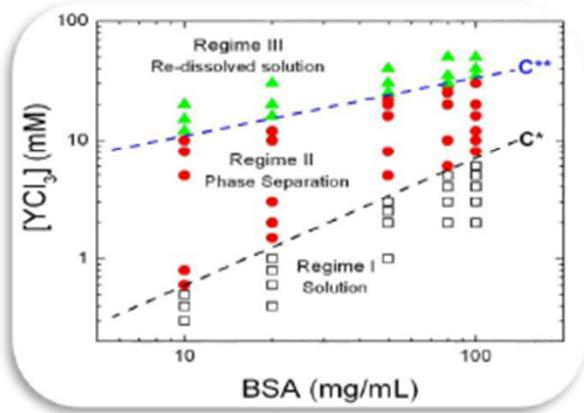

Organic Thin Films

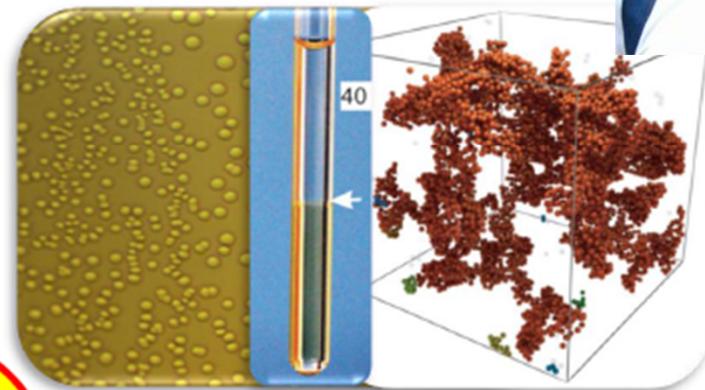

Brief reminder: Protein biophysics

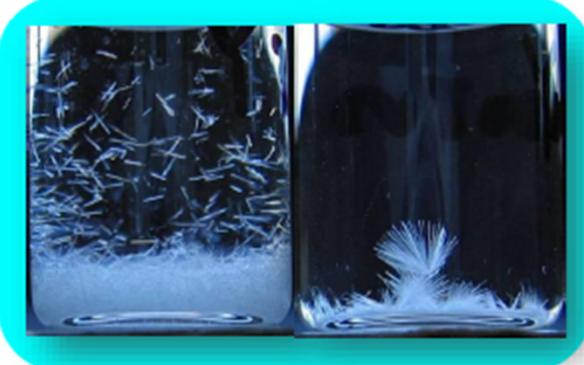

Tuning Protein Interactions by Multivalent Ions

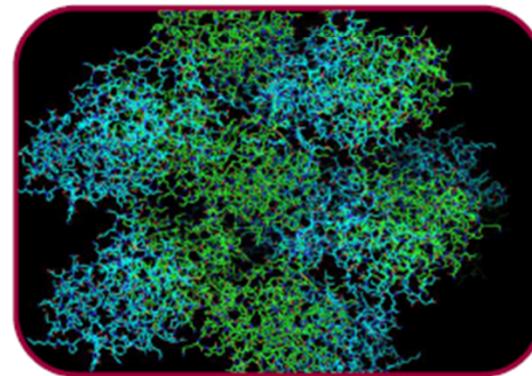

Reentrant condensation

LLPS and Gelation

Protein crystallization

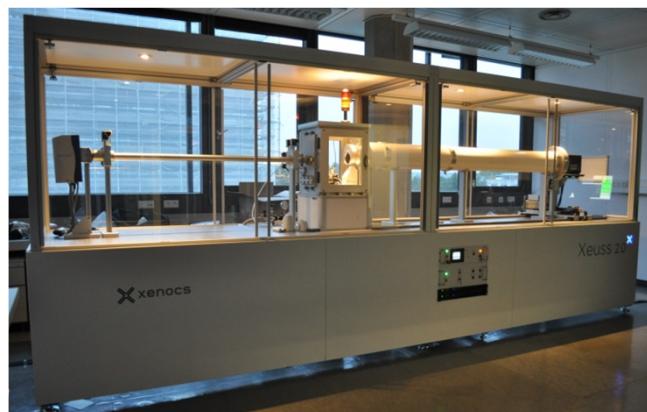

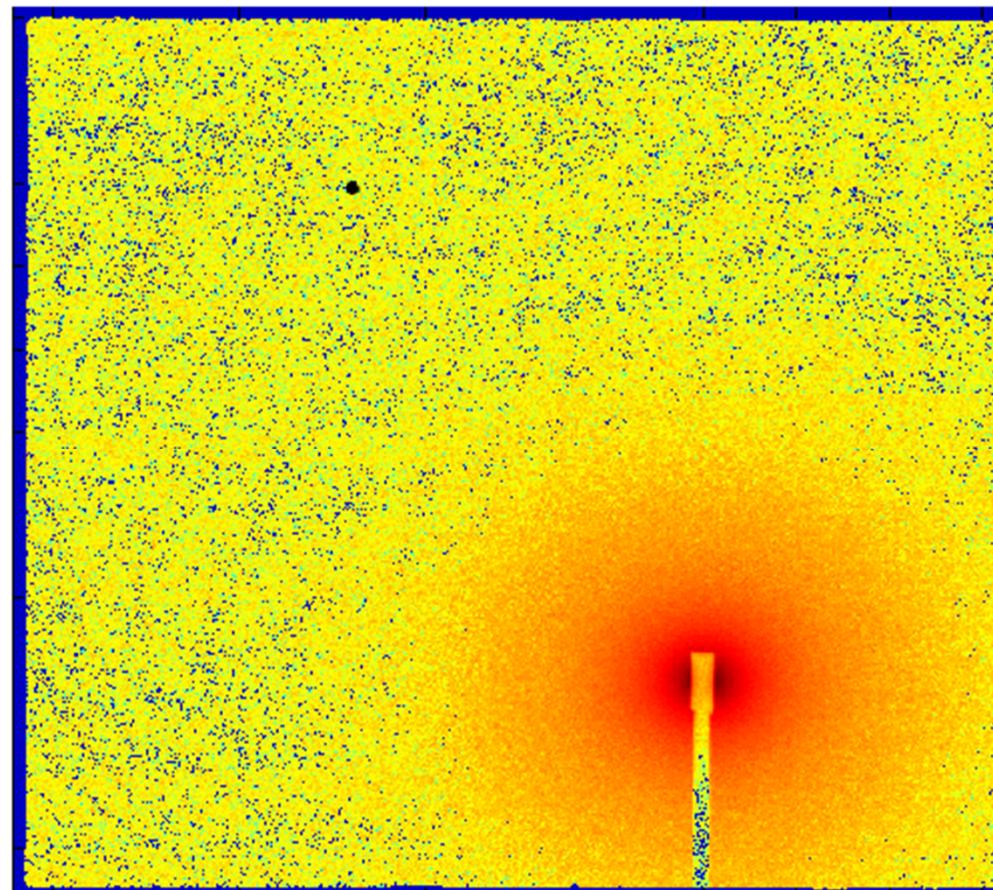

Static & Dynamic of Protein Clustering

Crystallization of BLG in the presence of Cd^{2+}

→ Observation by SAXS in real time (now as movie)
(smaller length scales than optical microscopy)

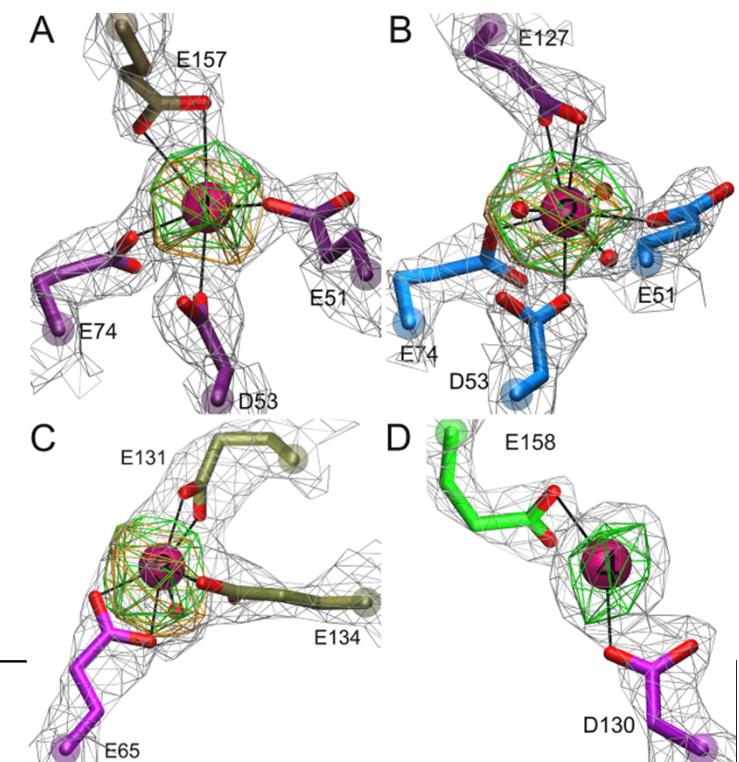

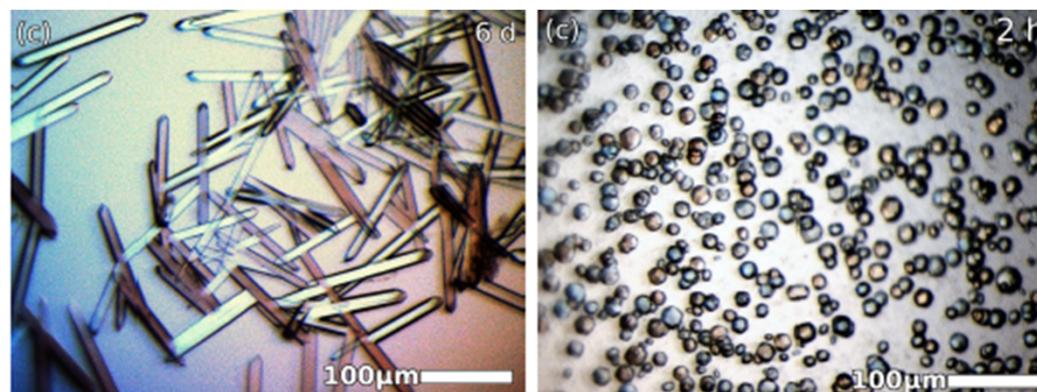

Mögliche Bachelor-Arbeiten

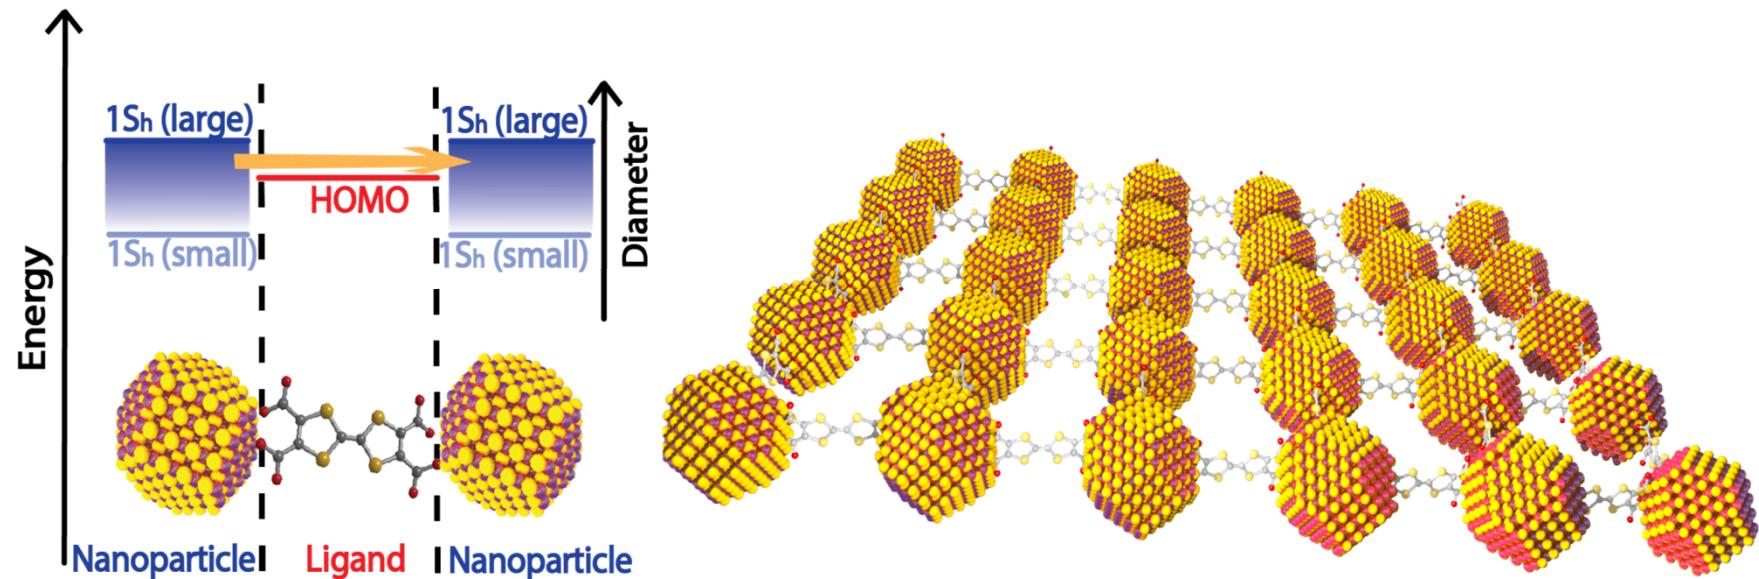

Bachelor thesis projects suggested by Fajun Zhang earlier

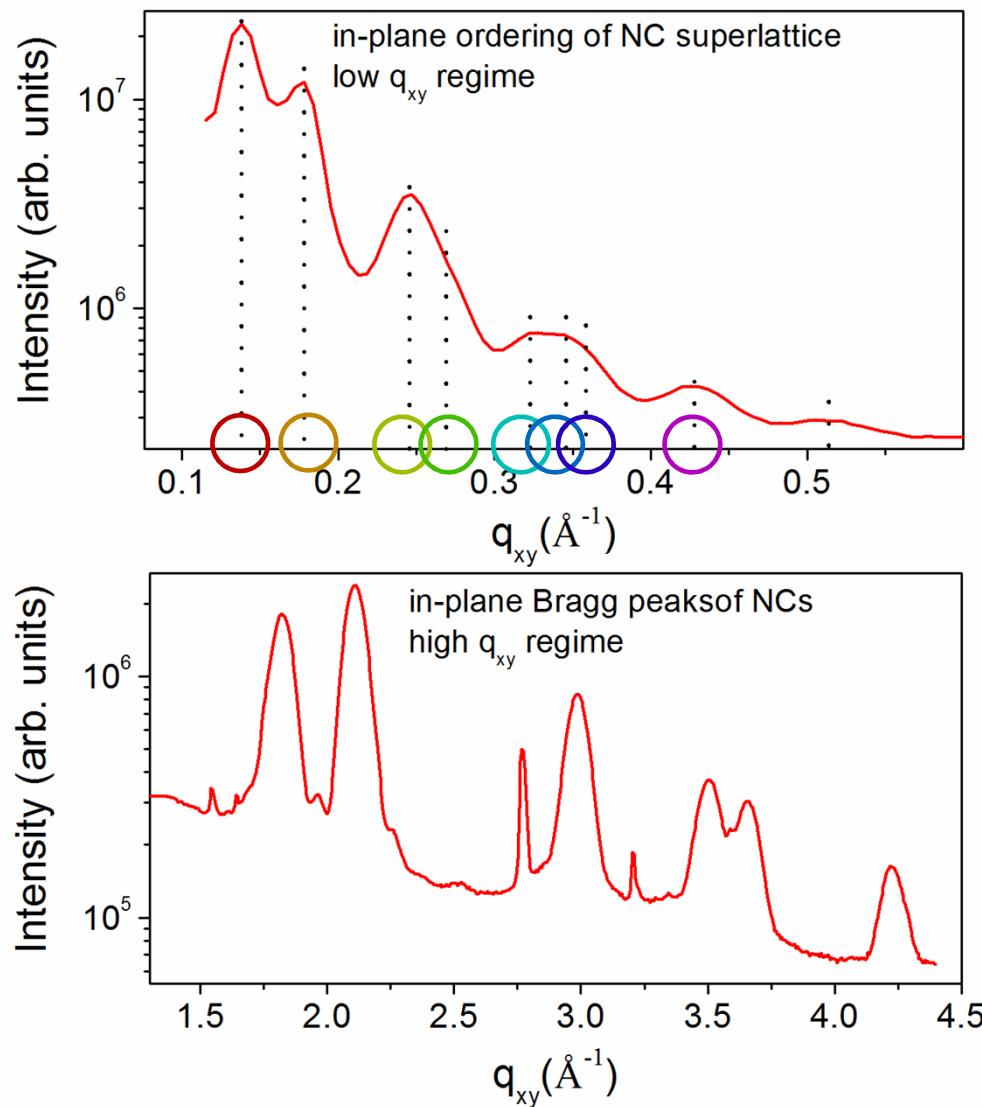

- Characterization of proteins and nanoparticles by SAXS
- Following protein crystallization by optical microscopy and SAXS
- Characterization of protein interactions & cluster formation
- Temperature sensitive smart materials based on LCST

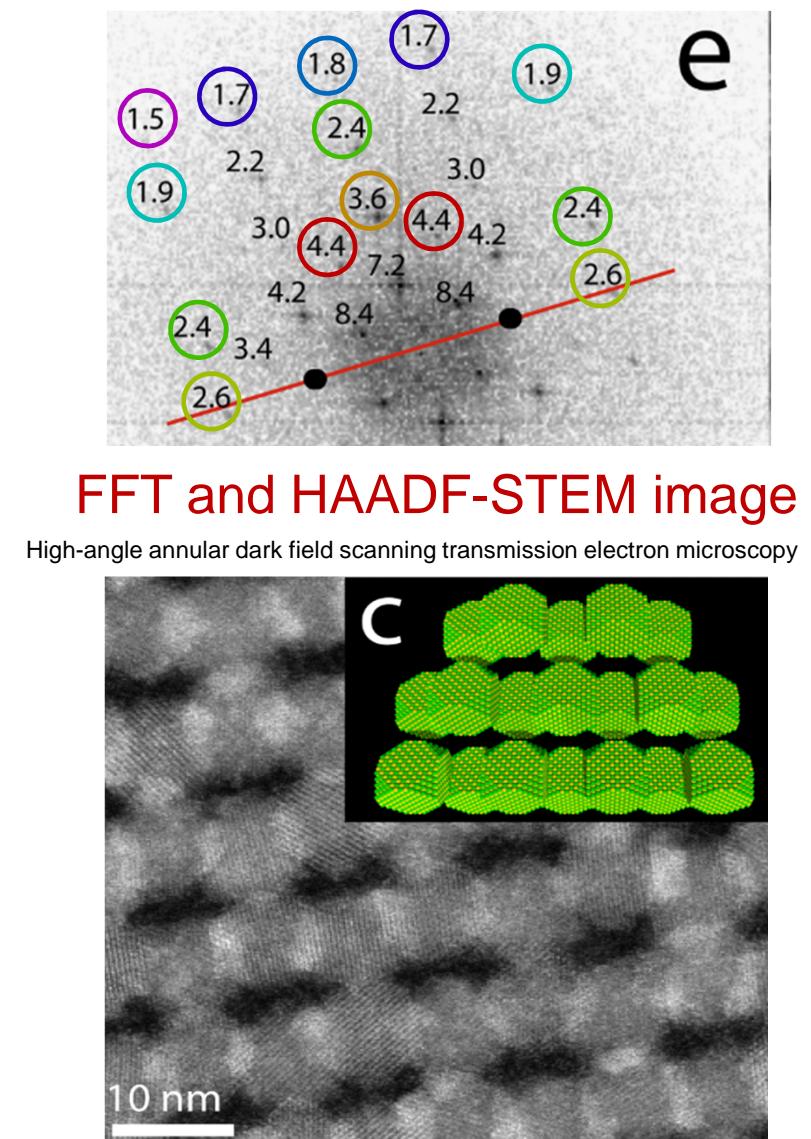

Coupled Organic-Inorganic Nanostructures (COINs)

In-Plane Structure of PbS Mesocrystals

8

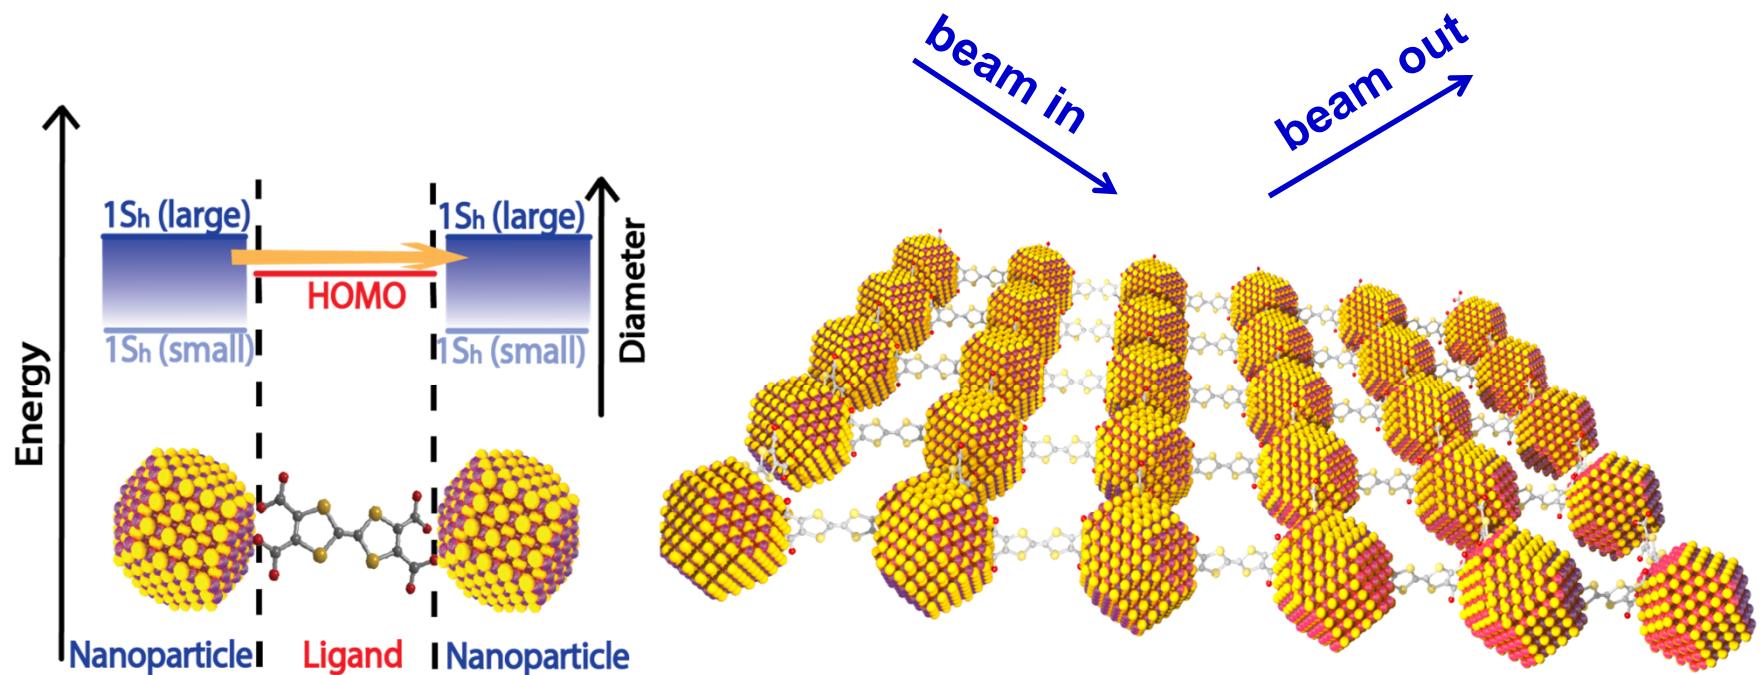

Collaboration with Marcus Scheele & Andreas Kornowski
M. Scheele et al., PCCP 17 (2014) 97

Mögliche Bachelor-Arbeiten

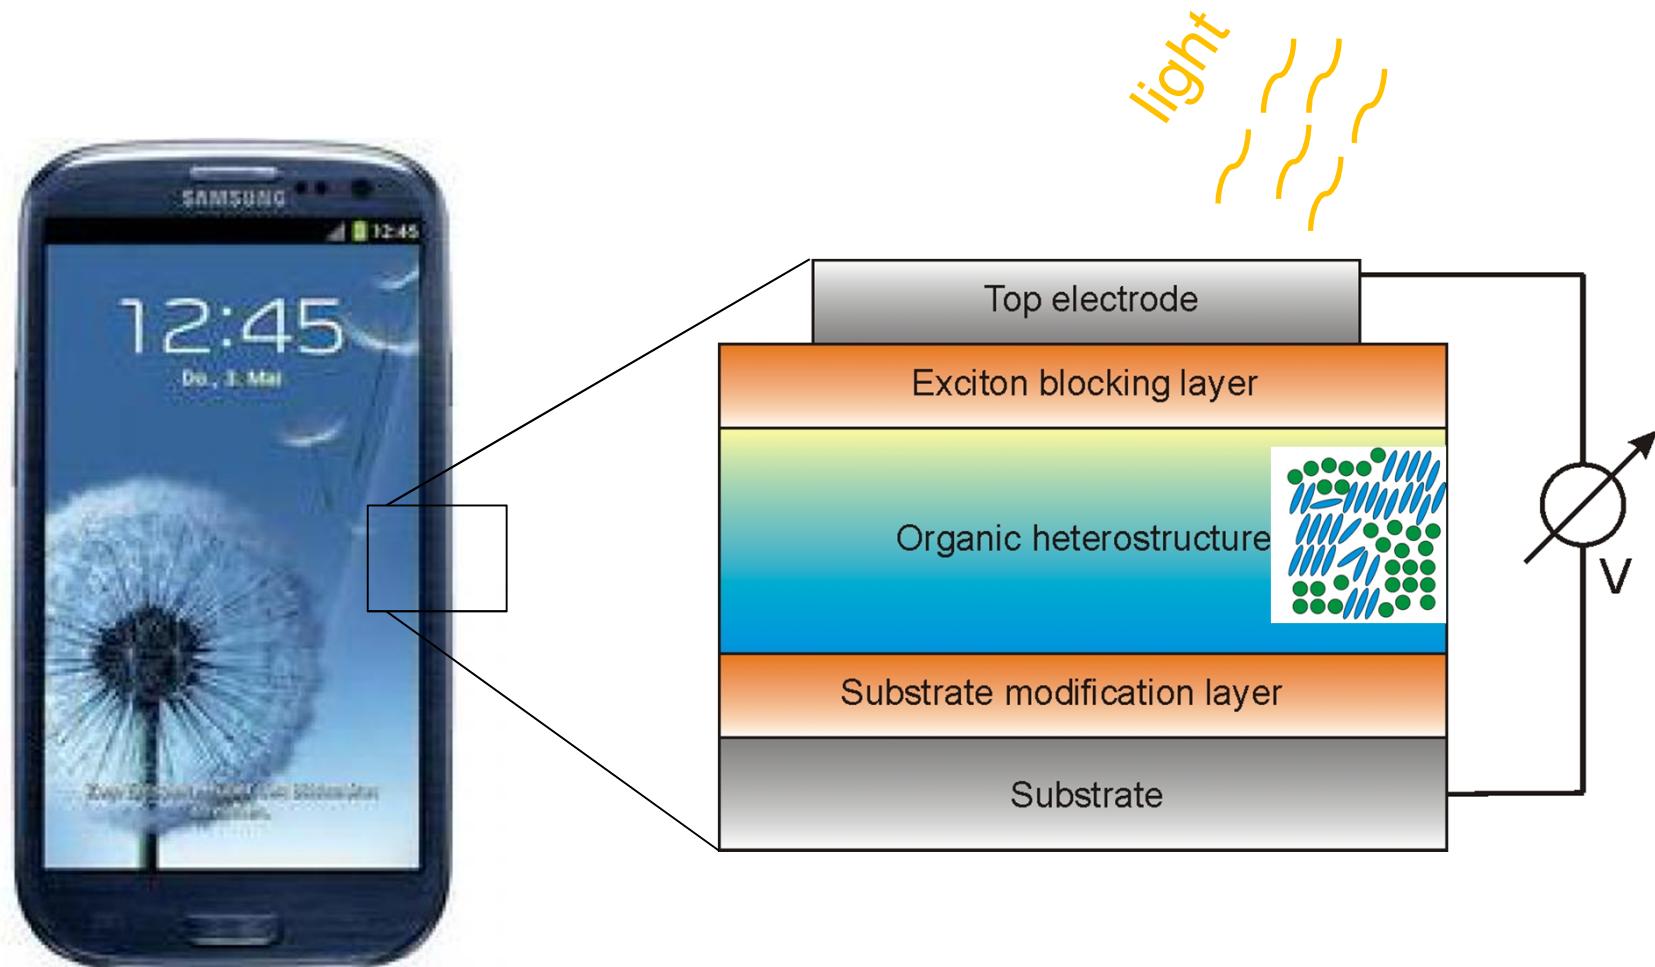

(in Kooperation mit Marcus Scheele)

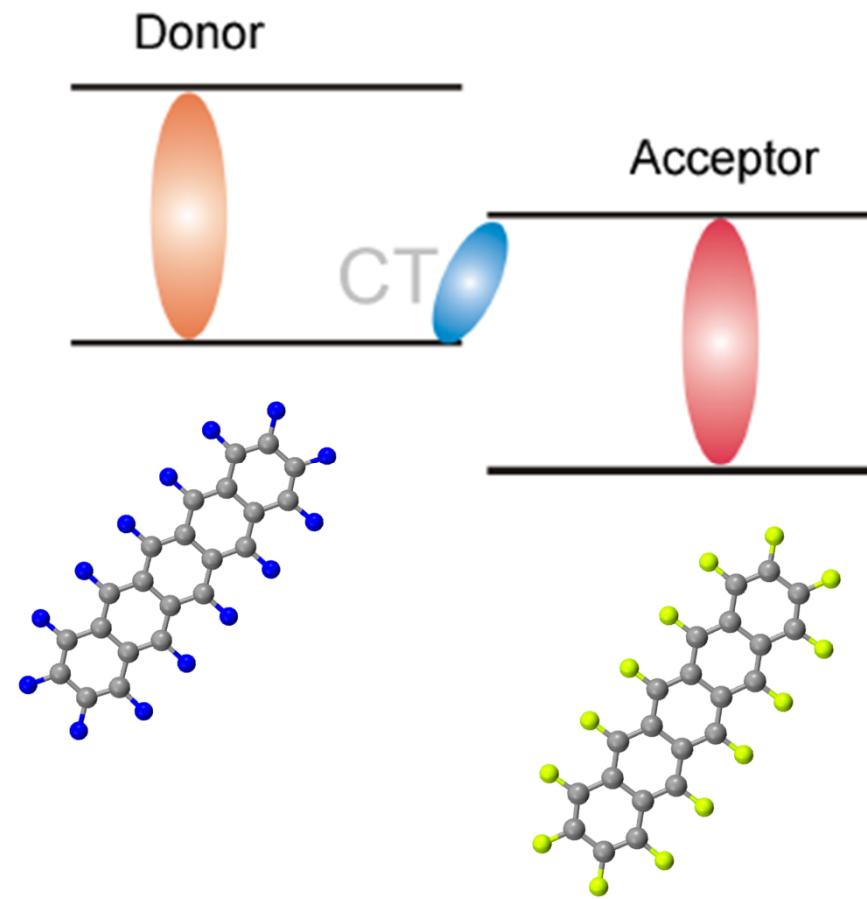

- Following COIN growth in real time
- Optical spectroscopy of COINs
- Towards switchable COINs ?

Organic Thin Films

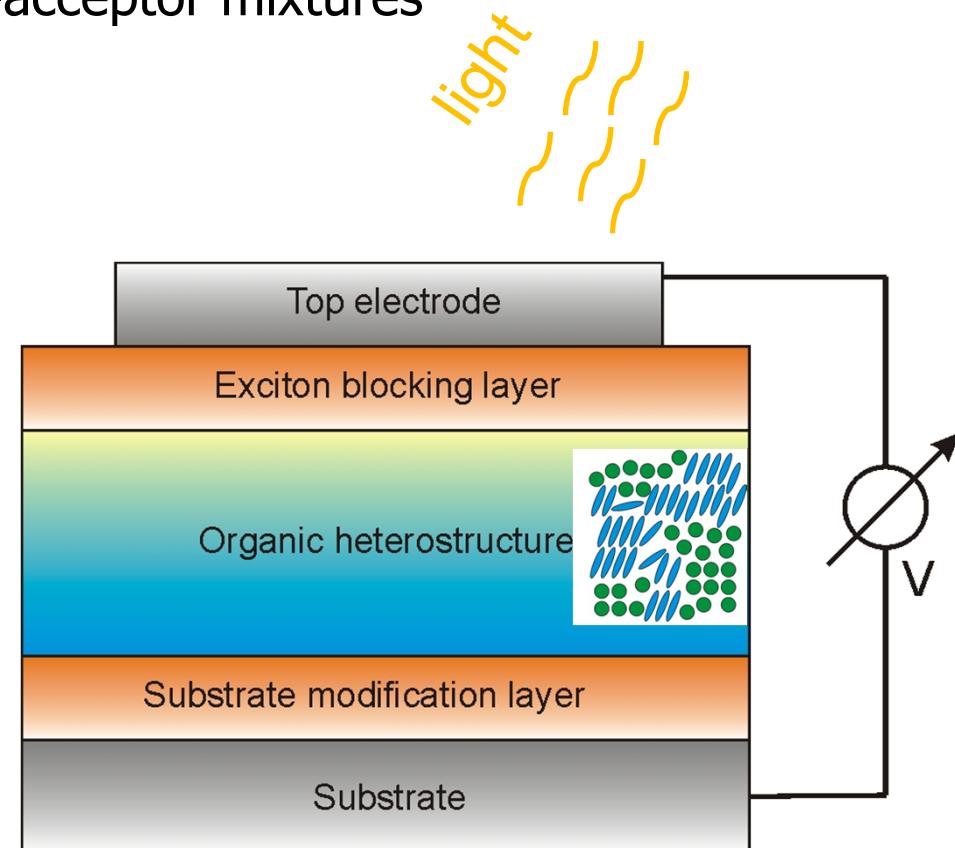

Charge Transfer Effects in Donor-Acceptor Mixtures

Mögliche Bachelor-Arbeiten

- Real-time growth study of donor-acceptor mixtures
- Optical spectroscopy of donor-acceptor mixtures

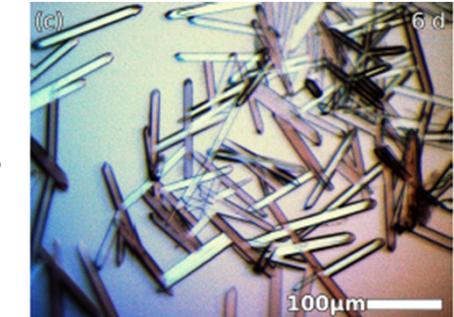

Molecular and Biological Matter

Mögliche Bachelor-Arbeiten

(z.T. Kombinationen 1-2 Studierende pro Thema möglich)

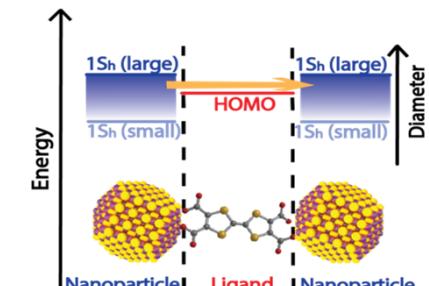

Protein Biophysics (Fajun Zhang)

- Characterization of proteins and nanoparticles by SAXS
- Following protein crystallization by microscopy and SAXS
- Protein interactions and cluster formation
- Temperature sensitive smart materials based on LCST

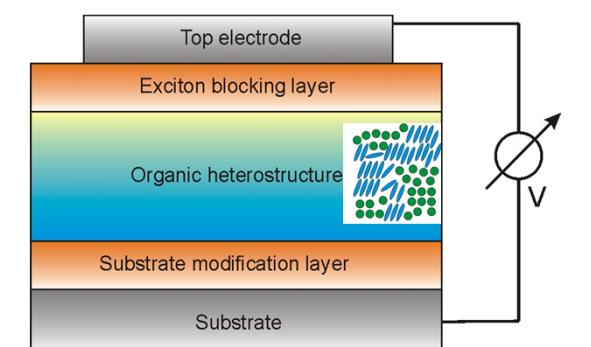

COINs (Kooperation mit Marcus Scheele)

- Following COIN growth in real time
- Optical spectroscopy of COINs
- Towards switchable COINs ?

Organic Thin Films

- Real-time growth study of donor-acceptor mixtures
- Optical spectroscopy of donor-acceptor mixtures

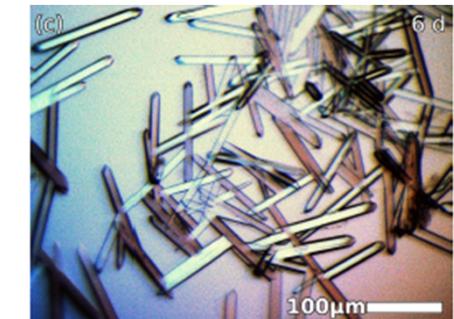

Molekulare und Biologische Materie

Mögliche Bachelor-Arbeiten

(z.T. Kombinationen 1-2 Studierende pro Thema möglich)

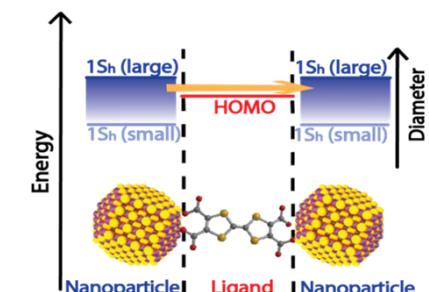

Protein-Biophysik (Fajun Zhang)

- Charakterisierung von Proteinen und Nanopartikeln mit SAXS
- Protein-Kristallisierung mit Mikroskopie und SAXS
- Protein-Wechselwirkungen und Cluster-Bildung
- Temperatur-sensitive "smart materials" mit LCST

COINs (Kooperation mit Marcus Scheele)

- COIN-Wachstum in Echtzeit
- Optische Spektroskopie von COINs
- Schaltbare COINs ?

Organische dünne Schichten

- Wachstum von Donator-Akzeptor-Mischungen in Echtzeit
- Optische Spektroskopie von Donator-Akzeptor-Mischungen
